

UNI-CRAFT SOLUTION SPOTLIGHT

CUSTOM LIFT TABLE AND TRACK SYSTEM

Problem

A panel board manufacturer needed a flexible workstation to assemble panel boards of varying sizes. Assemblies requiring additional support could be accommodated without dedicating the production area to a permanently oversized work surface.

Our Solution

UCC designed a custom lift table system with a stationary lift and a track-mounted mobile lift. Together, they provide a larger work surface for standard panels, while the mobile lift can be repositioned to support larger assemblies. The system improves ergonomics, positioning, and workflow flexibility.

Customer Profile

Market Segment: Panel Board Manufacturing
Application: Variable-Size Panel Board Handling & Assembly
Equipment: Dual Scissor Lift Tables with Hydraulically Driven Track System

The Uni-Craft Solution: Flexible Panel Board Support & Positioning

Rather than using a permanently oversized workstation, UCC engineered a versatile material-handling system that adapts to different panel board sizes. The combination of a stationary lift, a mobile tracked lift, and a single hydraulic power unit improves product support, operator access, and assembly flexibility.
